

## November 2023

# Introduction

16 geographically based Integrated Community Teams (ICTs) across Brighton and Hove, West and East Sussex have now been agreed.

The ICT Programme Team have since implemented an ICT Data Group, enabling ICB, Public Health, Local Authority, VCSE and wider stakeholders to meet and collaborate regularly in the development and design of Sussex ICT data core profiles.

The Sussex ICT model, will be driven by data and reflective of population needs. To do this effectively we need to access a variety of data sets that enable us to understand each of the ICTs' local demographics, health needs, social determinants and wider determinants of health.

Different data sources complimented by Local Knowledge and Community Insight will be key in highlighting specific needs and challenges faced by each ICTs population. This will allow us to construct the core offer that will be delivered by ICT delivery teams, design how these teams need to be configured and what might need further local tailoring due to marked differences in population need.

These opening ICT data packs are intended to set the scene for the ICTs. Whilst they alone will not provide the final answer, they are designed to help stimulate the questions which will. After initial release in December, the packs will develop further in response to feedback to help support the ICTs in their development.

*Better health and care for all*

# Draft Headline Findings

- Around 99,900 people live in Lewes ICT, one of the least densely populated ICTs in Sussex.
- Population increase (below the national average) has mainly come from internal migration, with fewer births than deaths in the area.
- Older age profile, fewer 20 to 40 year olds, more older people living alone.
- Less ethnically diverse than the national average, more LGB+ people, more people with a disability and more veterans.
- Two Core20 neighbourhoods (representing the most deprived 20% of neighbourhoods nationally) within Lewes town and Newhaven with a population of approximately 3,000.
- Housing costs are high relative to earnings.
- Compared to England, Life expectancy is similar for males but significantly better for females.
- Top 5 causes of the greatest burdens of ill-health in East Sussex are: heart disease, low back pain, COPD, lung cancer, and stroke.
- High rates of under 5's admissions for accidents and injuries
- Nearly a third of people have high anxiety, high rates of depression, but fewer are unhappy.
- Over 1 in 5 adults are classified as obese.
- Whilst more people walk for their travel, it is the lowest ICT in Sussex for travel by cycle.
- High rates of self-harm admissions and drug related deaths.

# Draft Headline Findings continued...

## Compared to Sussex:

- Lower patient ratings for primary care and lower levels of GPs, nurses and direct patient care staff.
- More patients with atrial fibrillation, cancer and have had a stroke to be managed in primary care and fewer diabetic patients who have achieved all three treatment targets.
- More calls to 111, higher (2-hour) referrals to urgent community response teams, higher urgent treatment centre attendances, more A&E attendances (including same day urgent care), higher % of emergency admissions via A&E.
- Fewer emergency admissions resulting in long lengths of stay over 21 days.
- Higher rate of A&E attendances from care homes but with fewer being admitted.
- More new cases of cancer and more 2-week-wait results resulting in a cancer diagnosis.
- More long waiters at Princess Royal Hospital in Haywards Heath and the Royal Sussex County Hospital in Brighton, and higher rate of overnight inpatient.
- More community nursing contacts.

## Compared to East Sussex

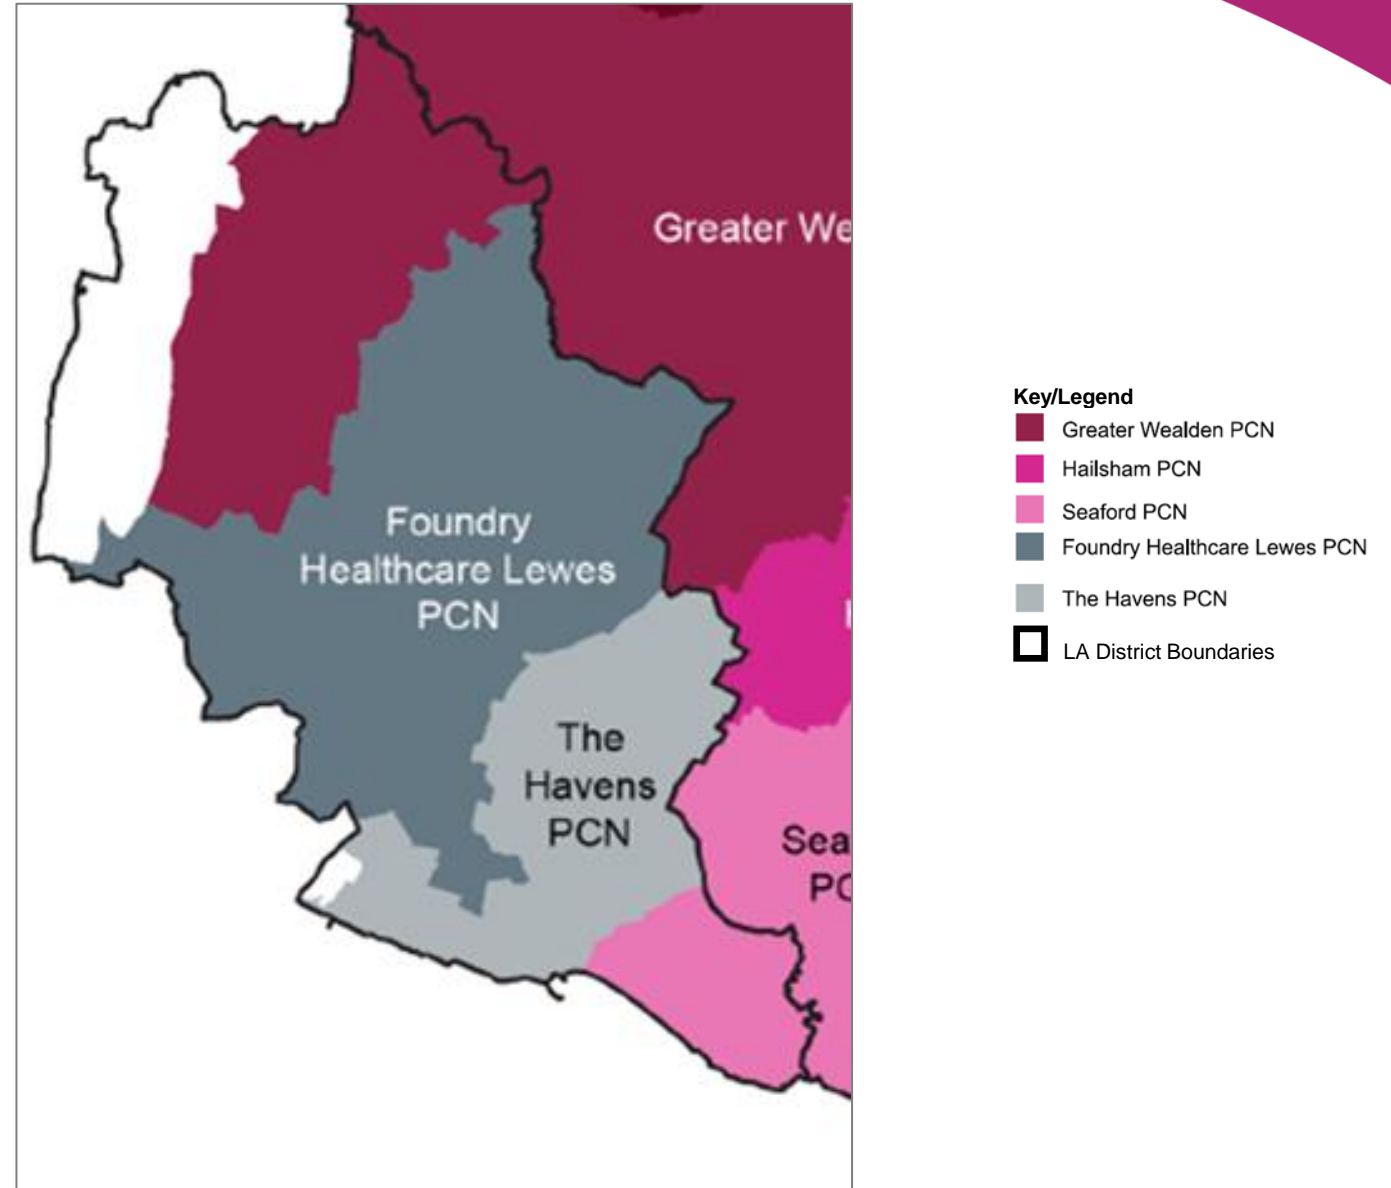

- More adults in permanent residential care

# Lewes ICT Geography

The geography of the ICT is not an exact match between Local Authority District and NHS practice/PCN catchment.

By general rule the slides on the health of the population will be split by District and those slides on use of healthcare services split by GP/PCN registered population.

Where slides deviate from this it is noted

*Better health and care for all*

care for all

# Who lives in Lewes ICT

Around 99,900 people live in Lewes (2021 Census)  
An increase of 2.5% since 2011

Between 2011 and 2020 there have been  
8,035 Births  
10,002 Deaths  
7,090 estimated increase from internal UK migration  
760 estimated increase from international migration

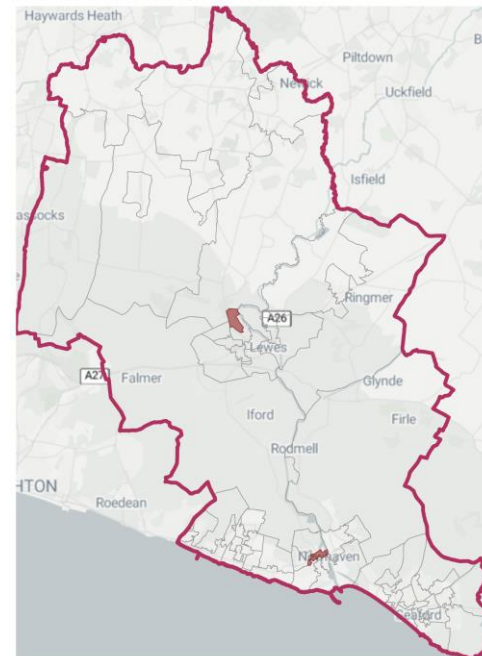

Census 2021 data:  
21% of the population is under 20,  
compared to 23% for England  
26% of the population is 65 or over,  
compared to 18% for England  
4.1% of the population is 85 or over,  
compared to 2.4% for England

787 residents aged 65+ live in a care home  
(with or without nursing)

## Lewes Integrated Community Team

Of the 62 neighbourhoods (2011 based LSOAs) in the Lewes ICT, there are **two Core20 neighbourhoods** (representing the most deprived 20% of neighbourhoods nationally) with a population of approximately 3,000 residents (Census 2021).

*ter health and care for all*

# Key Demographic Groups within Lewes ICT

Lewes ICT has an older age structure than England, with proportionally more older people than younger with more than a quarter over 65.

Compared to England there are fewer:

- People from ethnic minorities – only 1 in 10 people
- People where English is not their main language

But more

- LGB+
- People who previously served in the army
- People with a disability – about 1 in 5
- People who are married/in a civil partnership – nearly half

## Lewes ICT population groups

### Age

Lewes has an older age structure than England:

- 20.8% of people are aged under 20 (23%)
- 52.7% aged 20-64 (58%)
- 26.5% aged 65+ (18%)

### Ethnicity

11.1% of people are Black or racially minoritised\* (27%):

- 1.9% Asian or Asian British (10%)
- 0.7% Black or Black British (4%)
- 2.5% Mixed or multiple ethnic group (3%)
- 0.2% Arab (0.6%)
- 5.3% White Irish or White other (8%)

### Religion

48.2% of people have no religion or belief (37%):

- 42.7% Christian (46%)
- 0.8% Muslim (6.7%)
- 0.3% Jewish (0.5%)
- 0.6% Buddhist (0.5%)
- 0.3% Hindu (1.8%)
- 0.1% Sikh (0.9%)
- 0.8% Other religion (0.6%)

### Pregnancy & maternity

There were 781 live births in 2021<sup>2</sup>

### Sex

Female 51.8% (51%)  
Male 48.2% (49%)

### Gender identity

0.4% of adults aged 16+ identified as Trans in the 2021 Census (0.5%)

### Sexual orientation

4% of those aged 16+ identified as LGB+ (gay or lesbian, bisexual or other minority sexual orientation) (3%)

### Language

For 2.9% of people, English is not their main language (9%)  
0.3% do not speak English well (1.6%)

### Disability

20.4% of residents are disabled under the Equality Act (17%)

### Children in care

At the end of March 2022, there were 628 children aged 0-17, 62 per 10,000, living in care in East Sussex (England 70 per 10,000)<sup>1</sup> [UTLA](#)

### Veterans

4.6% of people aged 16+ stated on the 2021 Census that they had previously served in the armed forces (3.8%)

### Marriage / civil partnership

47.8% of people aged 16+ are married or in a civil partnership (45%)  
31.4% Never married/civil partnership (38%)  
2.3% Separated (2%)  
10.6% divorced/civil partnership dissolved (9%)  
7.8% widowed / surviving civil partnership partner (6%)

### Carers

10.3% of people provide unpaid care (9%)

# Current population & change over the last 10 years

## In Lewes ICT

- There are relatively more women aged 45+ than England
- For men, this is the case for ages 50+
- Overall there relatively fewer younger people than England, particularly 20 to 40 year olds

## Between 2011 and 2021

- The total population has increased by 2.5%, which was lower than England (6.6%)
- The largest % increase was in the 70-79 year olds, which has increased by 3,061 (33.3%) since 2011

Total population 99,896

Lewes population profile in 2021

Increase in population 2,396

Lewes change in population between 2011 and 2021 Census, in 10 year age groups

	2021	2011	2021 change	England %	England %
0-19	20,788	21,400	-612	-2.9%	2.7%
20-64	52,652	54,000	-1,348	-2.5%	4.4%
65+	26,456	22,100	4,356	19.7%	20.1%
All ages	99,896	97,500	2,396	2.5%	6.6%

## PLACEHOLDER SLIDE

Please note – population projects rebased for 2021 Census will not be published until early 2024

# The building blocks of Health

- When we don't have the things we need, like warm homes and healthy food, and are constantly worrying about making ends meet, it puts a strain on our physical and mental health. This results in poorer physical and mental health, earlier onset of conditions and earlier death.
- Almost every aspect of our lives impacts our health and ultimately how long we will live – our jobs and homes, access to education and public transport and whether we experience poverty or discrimination. These are the building blocks of health.
- To create a county where everybody can thrive, we need all of the right building blocks in place:

Source: [How to talk about the building blocks of health - The Health Foundation](#)

*Better health and care for all*

# Building blocks of health in Lewes ICT

Overall in Lewes ICT, there are relatively fewer people living in more deprived areas than England.

Across the ICT, there are fewer children and older people living in poverty than England, and a slightly lower percentage of working age people on out of work benefits.

Housing cost is an issue in Lewes – with those on the lowest 25% of earnings requiring 11.6 times their earning to afford the lowest 25% of housing prices, compared to 7.4 times across England.

Lewes ICT compared to England

*Better health and care for all*

# Building blocks in Lewes ICT

Income deprivation is defined as receiving Income Support or income-based Jobseekers Allowance or income-based Employment and Support Allowance or Pension Credit (Guarantee) or Universal Credit (in the 'Searching for work', 'No work requirements', 'Planning for work', 'Working – with requirements' and 'Preparing for work' conditionality groups) or families not in receipt of these benefits but in receipt of Working Tax Credit or Child Tax Credit with an equivalised income (excluding housing benefit) below 60 per cent of the national median before housing costs

Income Deprivation Affecting Children Index (IDACI)

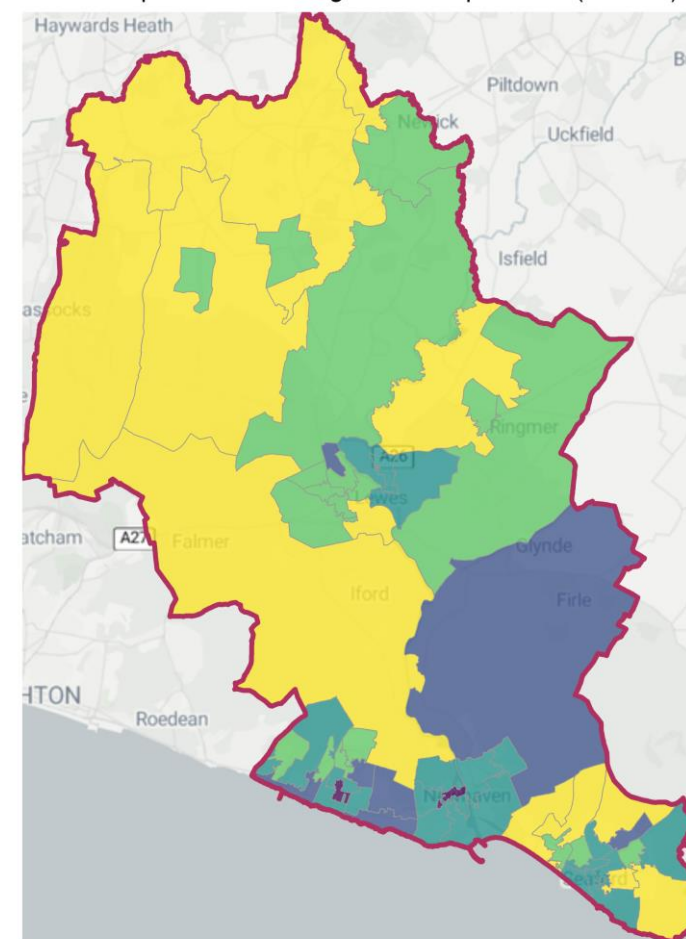

IDACI score  
(national rankings)

- Most deprived 20%
- Quintile 2
- Quintile 3
- Quintile 4
- Least deprived 20%

In Lewes ICT, four of its 62 neighbourhoods had an IDACI score (proportion of 0-15s living in income deprived families) in the top 20% most deprived neighbourhoods in the country. The highest score in a neighbourhood locally was 38.5% or one in three children experiencing income deprivation.

LSOA (2011) based boundaries.

for all

# Building blocks of health in Lewes ICT

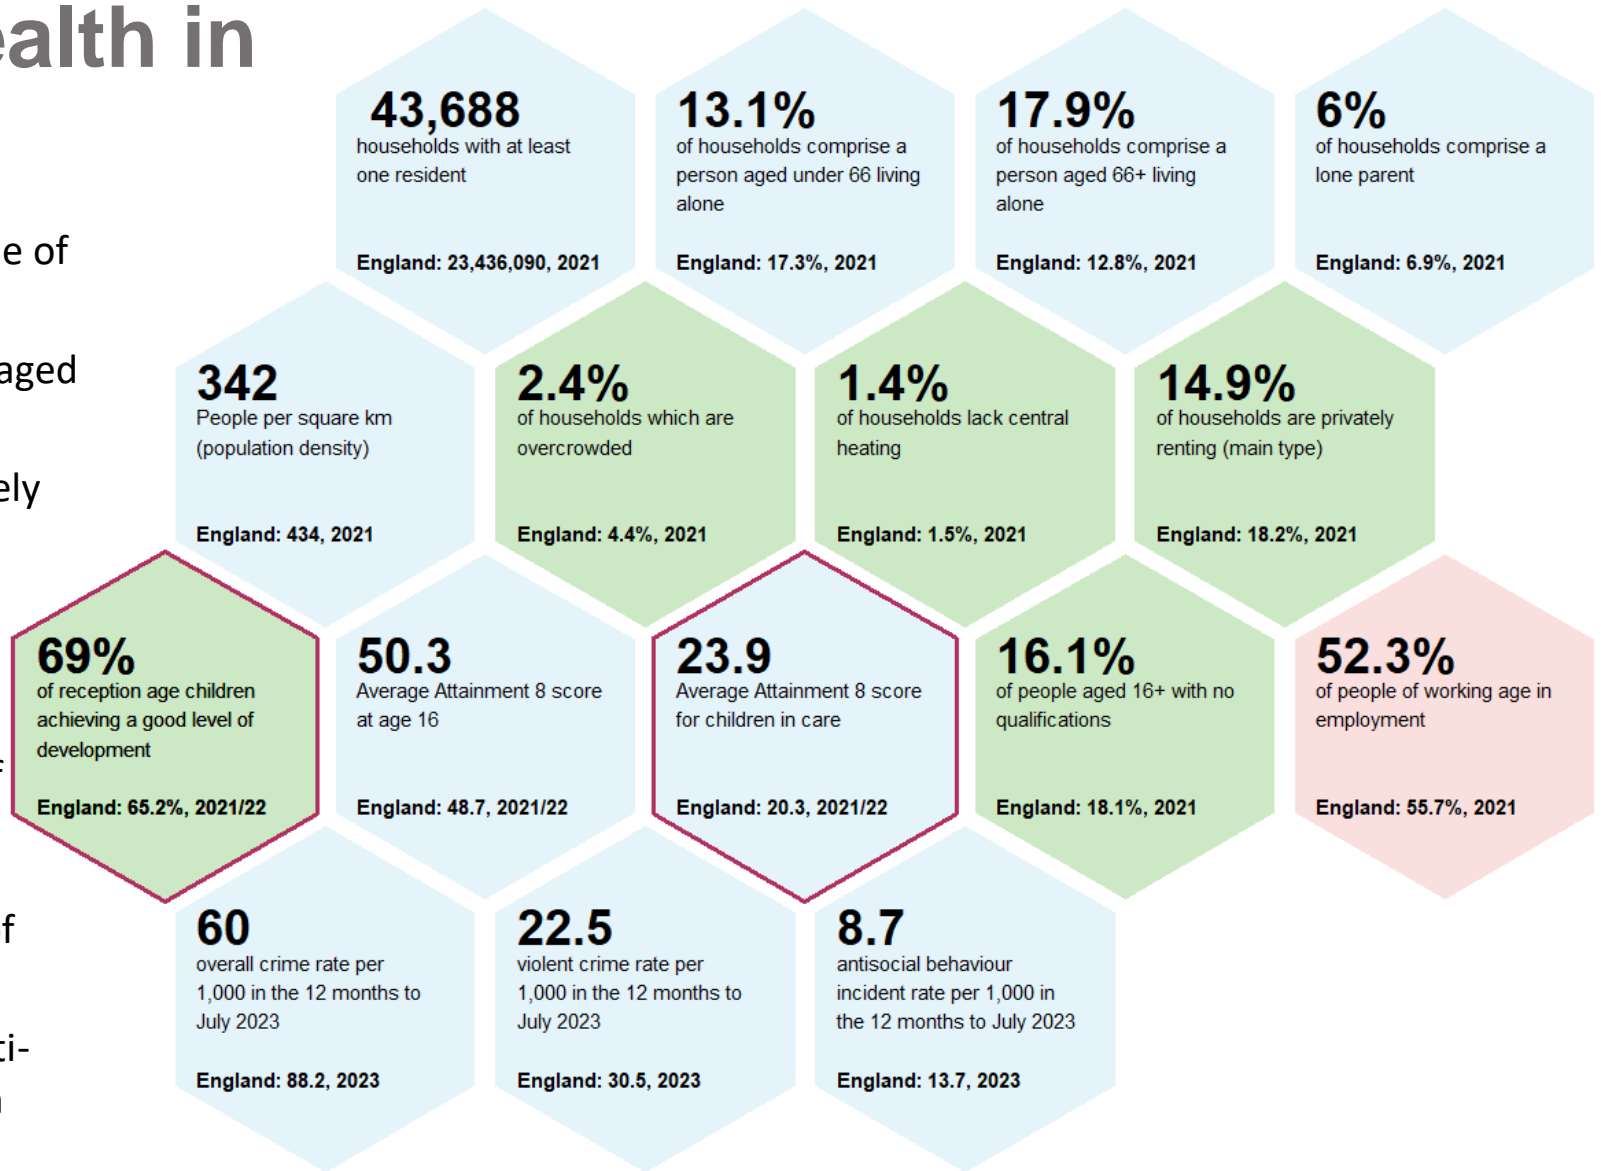

Within Sussex, Lewes ICT has:

- fewer people per square km and so is one of the least densely populated ICTs
- one of the highest percentage of people aged 66+ living alone
- only 15% of households which are privately rented
- lower overcrowding and lack of central heating, compared to England.

The population is relatively more educated compared to England with the percentage of children and children in care having a higher average attainment 8 score than England.

However, there are relatively fewer people of working age in employment than England.

Overall crime rate, violent crime rate and anti-social behaviour incident rate are lower than England.

# Lewes Integrated Community Team

Whilst some issues affect people of all ages, outcomes have been placed in the life stage where the impact may be greatest.

Data are shown for Lewes ICT and are compared with England

Available only at a higher geography (East Sussex local authority)

Available only for registered population (e.g. CCG or Sub-ICB geography)

# Life expectancy and inequalities – Lewes ICT

Compared to England, life expectancy at **birth** is

- Similar for males
- significantly higher for females and one of the highest in Sussex ICT area

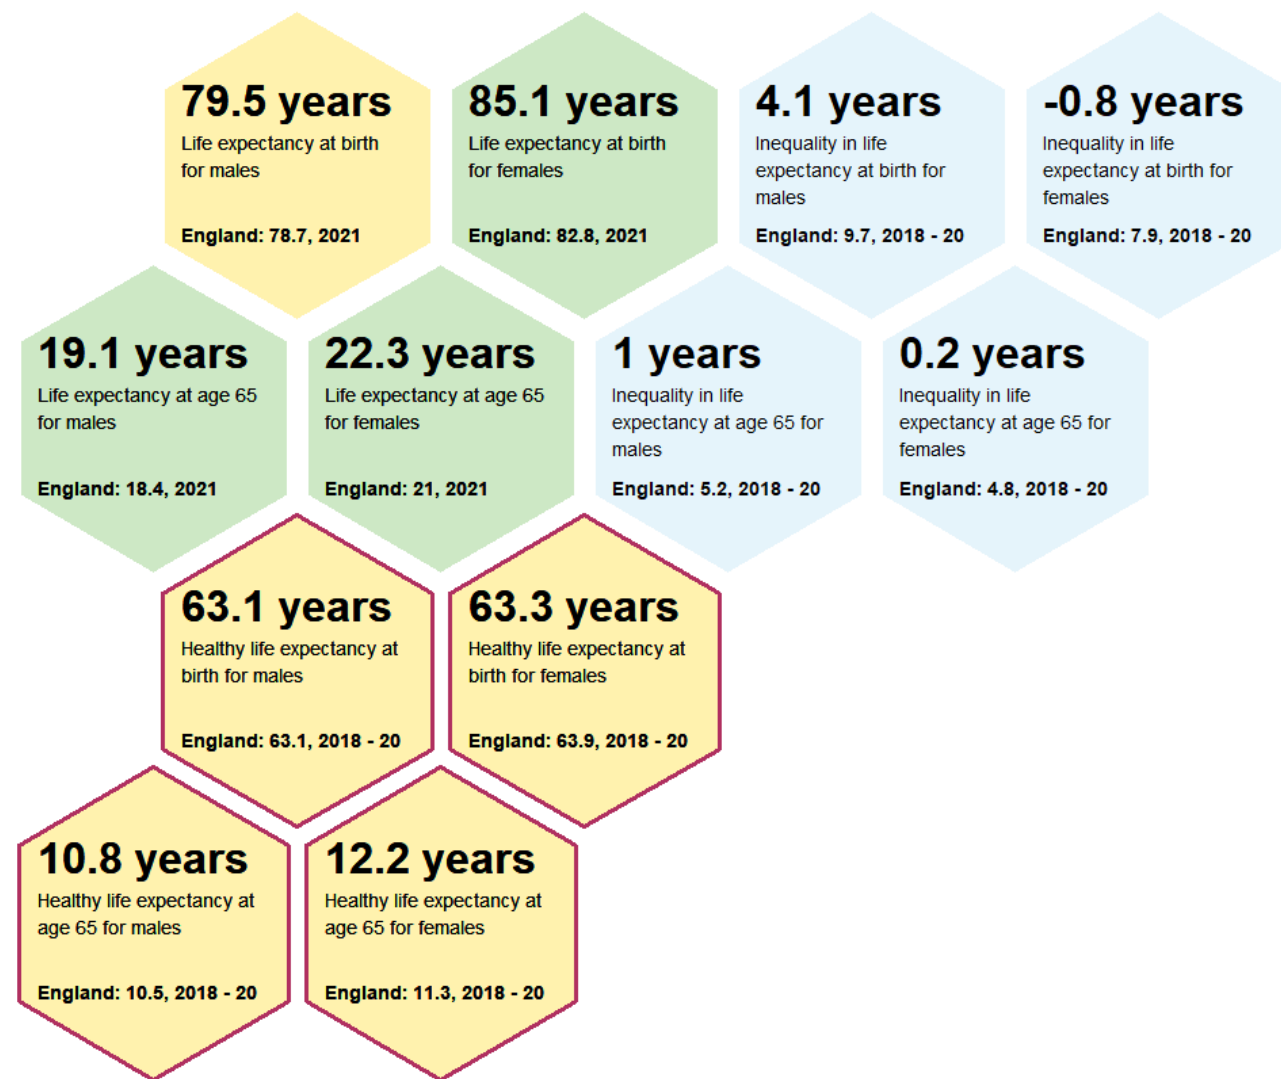

Compared to England, life expectancy at **65** is

- significantly higher for both males and females

Compared to England, the gap in life expectancy

- is lower for males but
- for females there is virtually no gap

Healthy life expectancy data is currently only available at East Sussex county level which is similar to England for both males and females.

# Main causes contributing to the gap in life expectancy – East Sussex

These figures are only available for the whole of East Sussex.

The causes of death which contribute the most to inequalities in life expectancy in East Sussex are:

- For males – Circulatory disease (23%), Cancer (18%) and Respiratory disease (12%)
- For females – Cancer (25%), Circulatory (23%) and Respiratory disease (16%)

Source: [Segment Tool \(phe.gov.uk\)](https://phe.gov.uk)

Causes of death contributing most to inequalities in life expectancy between the most and least deprived quintiles (20%) of each area.

East Sussex; data for 2020 and 2021 combined.

Data for lower tier local authorities has been included for 2014 to 2016 and 2017 to 2019, but have not been included for 2020 to 2021 as the breakdowns based on 2 years of data are not robust due to small numbers.

# Key risk factors and greatest burden of disease – East Sussex

Only  
available at  
County level

If we want to improve population health, we need to understand what the risk factors are for East Sussex's population and whether, and how, we can modify them

## Top 20 causes of the greatest burden of ill health

1 Ischemic heart disease
2 Low back pain
3 COPD
4 Lung cancer
5 Stroke
6 Diabetes
7 Alzheimer's disease
8 Lower respiratory infect
9 Depressive disorders
10 Falls
11 Colorectal cancer
12 Headache disorders
13 Breast cancer
14 Age-related hearing loss
15 Cardiomyopathy
16 Neck pain
17 Osteoarthritis
18 Other musculoskeletal
19 Endo/metab/blood/immune
20 Prostate cancer

Communicable, maternal, neonatal, and nutritional diseases

Non-communicable diseases

Injuries

## Top 20 risk factors

1 Smoking
2 High fasting plasma glucose
3 High body-mass index
4 High blood pressure
5 Alcohol use
6 High LDL
7 Low temperature
8 Low whole grains
9 Occupational carcinogens
10 Particulate matter
11 Kidney dysfunction
12 Drug use
13 Low physical activity
14 Low bone mineral density
15 High processed meat
16 Low fruit
17 High red meat
18 Secondhand smoke
19 Low legumes
20 Low nuts and seeds

Metabolic risks

Environmental/occupational risks

Behavioral risks

## To improve life expectancy, healthy life expectancy, inequalities in both life expectancy and healthy life expectancy:

- Tackle major behavioural risks – tobacco, diet, exercise, alcohol and drugs
- Diabetes is a rising concern
- CVD reduction – including controlling blood pressure key and has considerable population impact
- Cancer major cause of ill health, importance of behaviours and screening
- Mental health
- Immunisation
- Air quality and cold homes

## In addition, for healthy life expectancy and inequalities in healthy life expectancy tackle:

- MSK and pain management
- Sensory impairment

*Better health and care for all*

# Starting well in life in Lewes ICT

Lewes ICT is **similar** to England for

- infant mortality

significantly **better** for

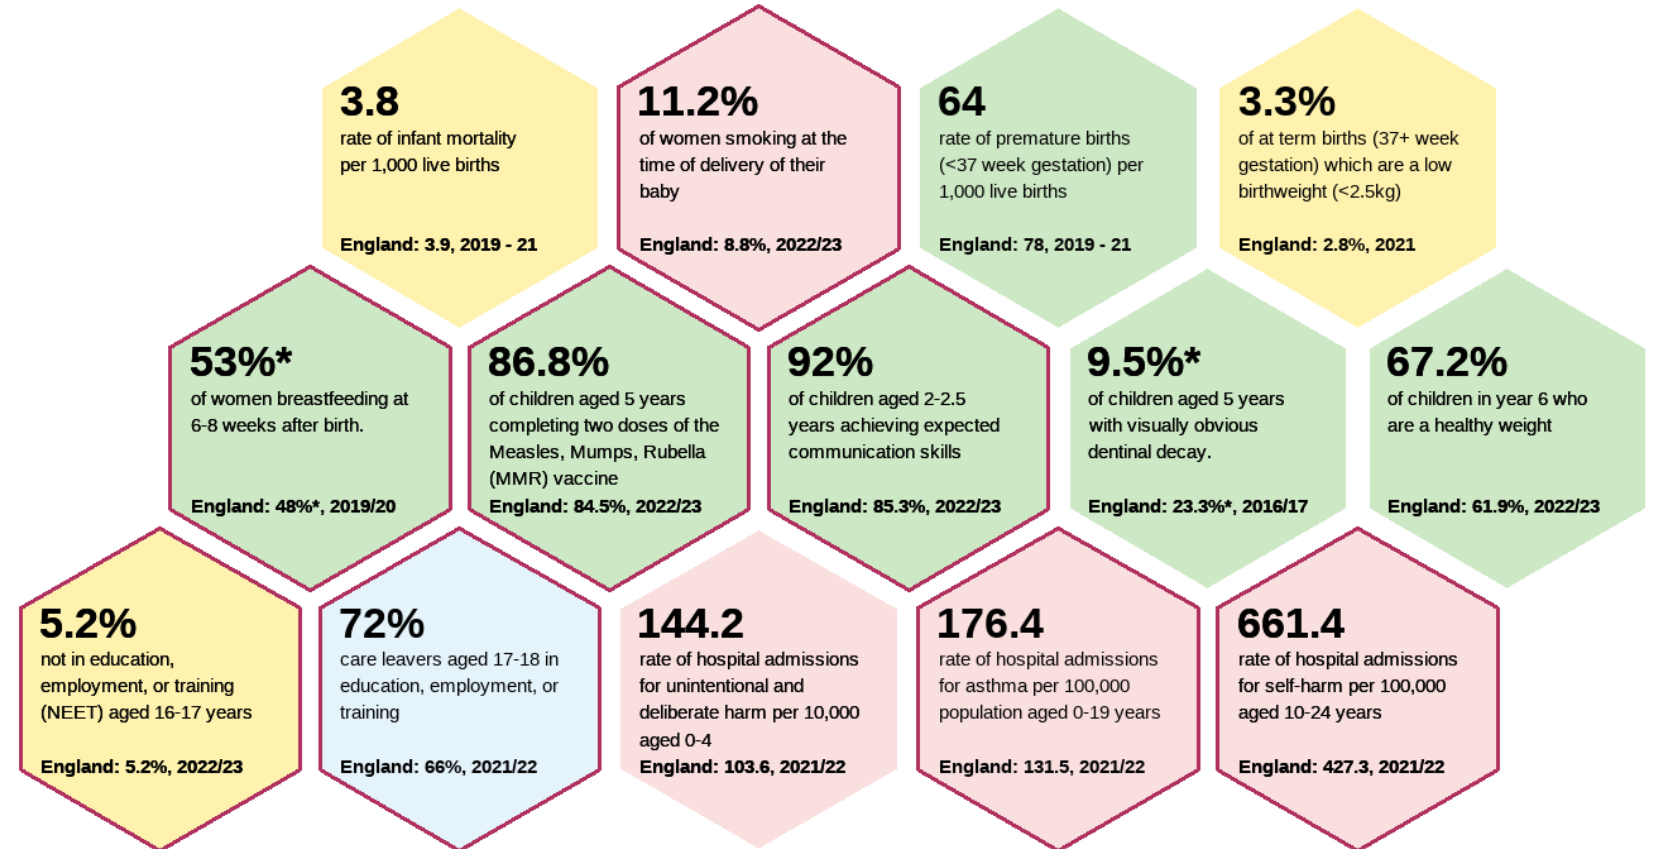

- premature live births
- year 6 children who are healthy weight

significantly **worse** for

- rates of hospital admission for unintentional and deliberate harm (age 0 to 4) in the ICT

Other measures are only at an East Sussex level and show significantly **better**

- overall MMR immunisation uptake and significantly **worse**
- admission rates for Asthma (ages 0 to 19)
- admission rates for self-harm (ages 10 to 24)
- mothers smoking at time of delivery

Lewes ICT compared to England

Available at a higher geography (East Sussex local authority) only

\* Note: due to data quality issues for these indicators in recent years, data are shown for an older time period than is currently available for higher geographies (e.g. regionally and nationally)

# Living well in Lewes ICT

Lewes ICT has significantly **better** rates of adults who are physically active, walking and for obesity but significantly **worse** rates for cycling.

Lewes ICT has the **highest** percentage for people with a high anxiety score of all Sussex ICTs, but one of the **lowest** percentages of people with a low happiness score.

Prevalence rates for hypertension, COPD, depression and smoking are similar to England.

For East Sussex overall there are significantly **worse** rates of 13 to 14 year olds receiving HPV vaccine compared to England.

# Living well in Lewes ICT

Compared to England, Lewes ICT has significantly **worse** rates of:

- Emergency admissions for self-harm
- Drug related deaths (highest in East Sussex)

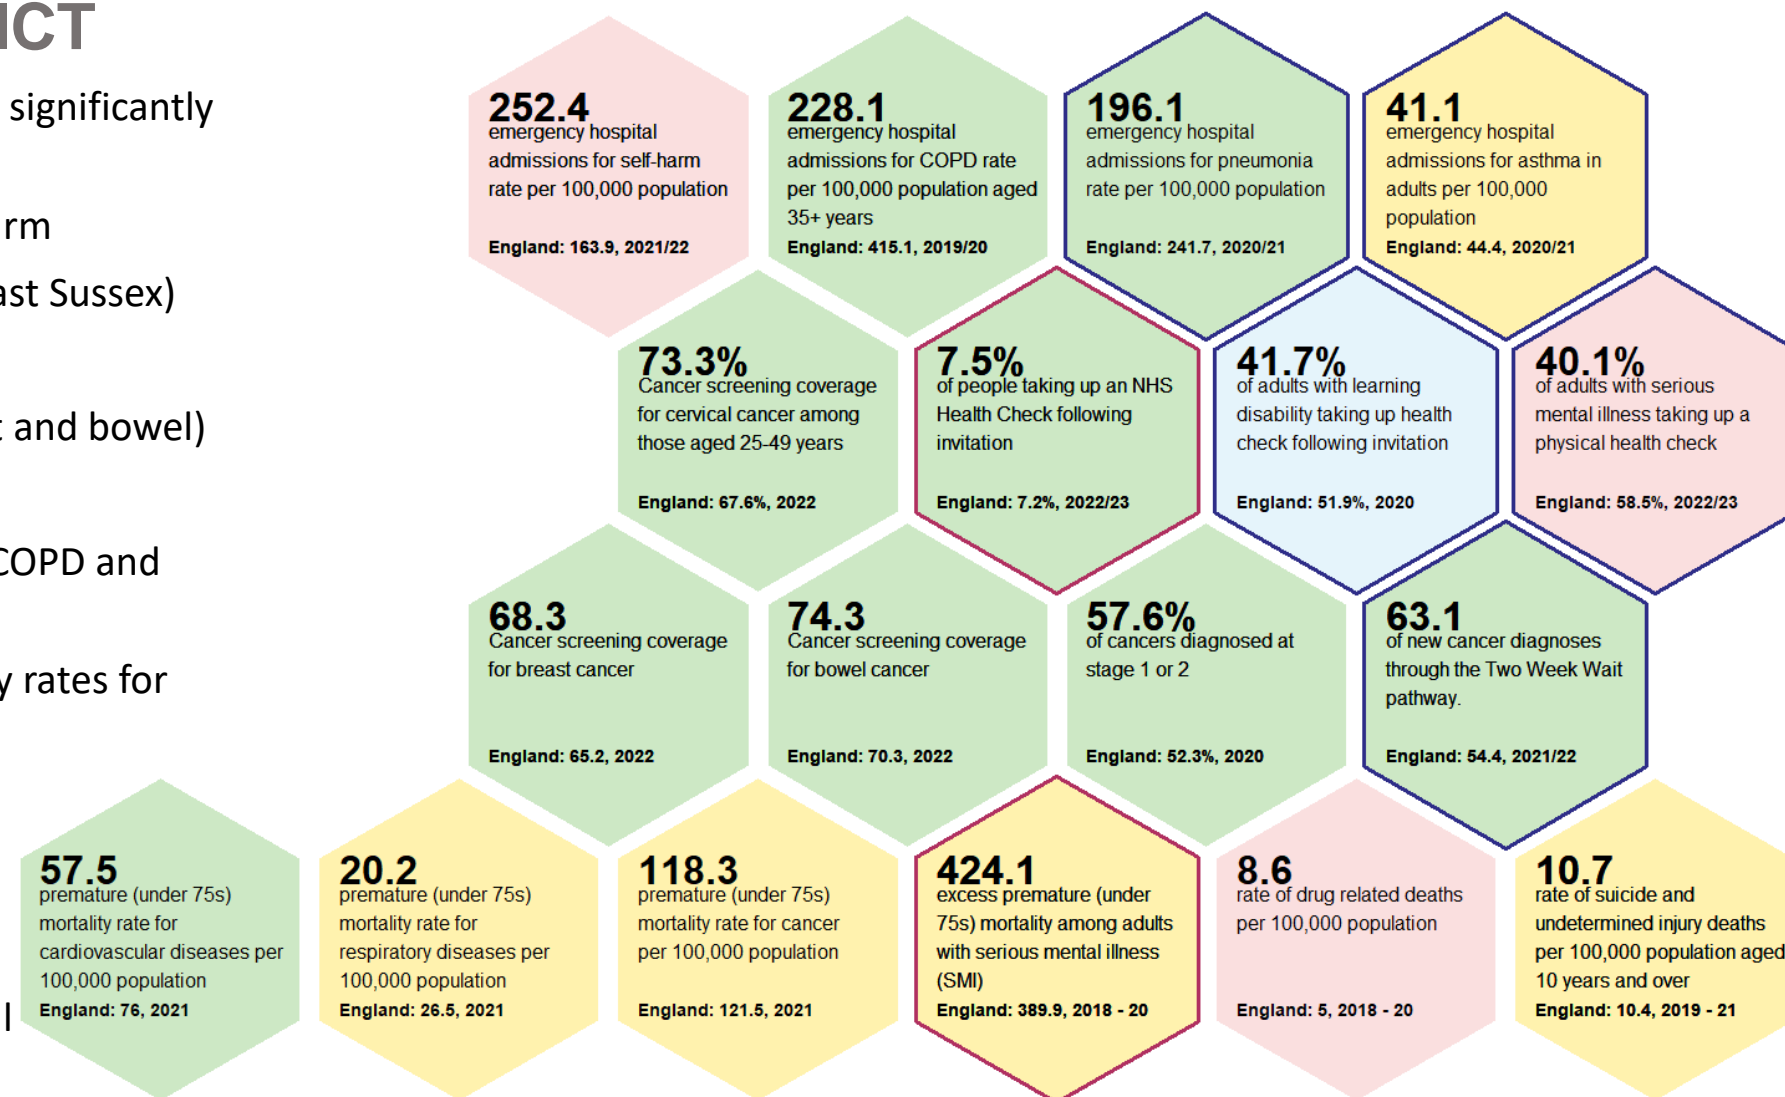

and **better** rates of

- Cancer screening (cervical, breast and bowel)
- Cancer diagnosis
- Emergency hospital admissions (COPD and pneumonia)

**similar or better** premature mortality rates for

- Cancer
- Respiratory diseases
- CVD

East Sussex county is significantly worse for adults with a serious mental illness taking up a physical health check

\* Note: rates have been calculated on rounded values and may not match outputs published elsewhere exactly.

# Dying well in Lewes ICT

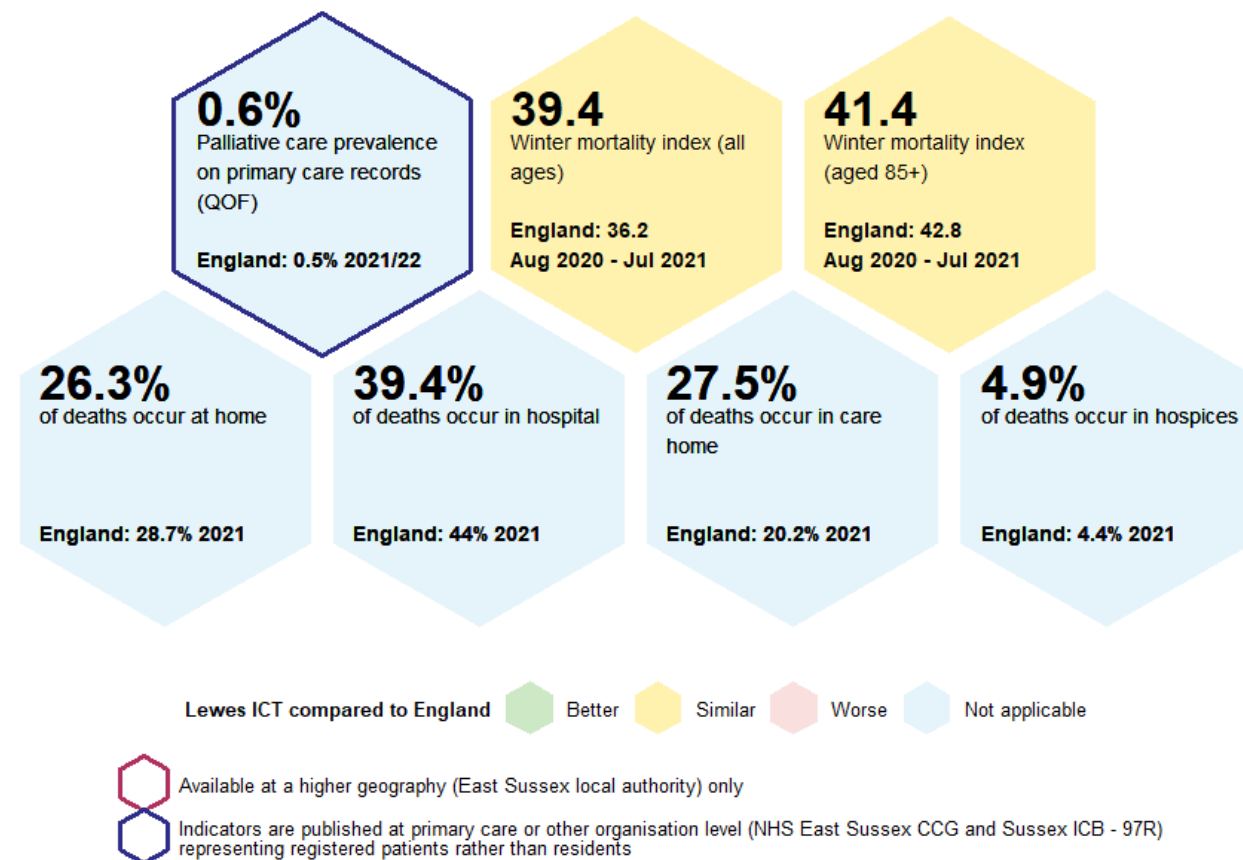

There are a limited set of indicators available around dying well.

Compared to England, within Lewes ICT (in 2021) there was a:

- lower percentage of deaths that occurred at home or in hospital
- higher percentage occurred in a care home or hospice.

(Please note the Covid19 pandemic affected the place of death data for 2021)

- similar winter mortality index (all ages and 85+).

*Better health and care for all*

# GP Primary Care in Lewes ICT

- Within Lewes ICT there are **3 PCNs and 1 partial ICT** with 7 GP practices with ranging populations
  - 3 practices (Foundry, Havens & Seaford) have >15k registered patients
- Compared to the Sussex average, patients who rated their GP practice good in surveys is worse than the Sussex average rated good have
- Patients in Lewes ICT who have annual Dementia plans is higher the Sussex average
- Compared to other parts of Sussex A&E attendances are higher in Lewes ICT
- Lewes ICT is lower than the Sussex average for :
  - Population growth
  - the weighted rate of patients per FTE GP and patients per GP/Nurse/DPC
  - Diabetes patients who have achieved all 3 treatment targets
